Using Social Media to Engage Learners

Dr. Patrick O’Connor
Dr. William Kist
Some students who can’t seem to focus on academics can spend hours outside of school on tasks they find engaging, be it video games, art, car repair or extracurricular activities.
Social Media to Engage Learners.

• Kent State University
Social Media are Engaging

• Interactive and social media technology can stimulate the interest of bored students and the participation of shy students. Web-based instruction can motivate students by creating more opportunities for active choice and collaboration.
Multiple Strategies Needed

• No single strategy will work to motivate all students. Motivating students often requires a combination of strategies that address the specific reasons why a student has become disengaged from school. A comprehensive effort between students, schools and home/family is needed.
Tale of Two High Schools

1. “A high school’s status is tied to its rigor. The tougher the better... The new reality for high-achieving students: work crazy-hard in high school and cruise in college. In high school, they pile on the college-level A.P. courses, face reading lists that can’t realistically be completed, and tackle complex advanced ideas once reserved for undergraduates.”

2. 40 percent of college students take remedial courses.

• 14% children 5-8 say they are low-frequency readers
• 50% 15-17 year-olds say they are low-frequency readers

Scholastic/Yankelovich poll, June, 2006
• 65%
Children 5-8 think reading for fun is very important

• 40%
Teens age 16-17 think reading for fun is very important

Scholastic/Yankelovich poll, June, 2006
• Three times as many boys (than girls) think that reading for fun is “not at all” important.
• Fewer boys than girls say they enjoy reading for fun and read on a regular basis.

Scholastic/Yankelovich poll, June, 2006
The Tipping Point

- As of 2006, people under 18 spend more minutes per day reading from a screen than they do reading from a page.

  » Don Leu, University of Connecticut
Reading From a Screen is Different

• Reading from a screen is a multi-modal experience (includes print, design, still images, moving images, sound, advertising)
• Reading from a screen is more social
• Reading from a screen is more mobile

Of Buzzfeed’s 100 million visitors in February, 2014, over 50 percent were from mobile devices

“Buzzfeed aims content at viewers’ emotions” Cleveland Plain Dealer, March 21, 2014
“Social Media and Young Adults”
www.pewinternet.org

• 73% of wired American teens now use social networking websites, a significant increase from previous surveys. Just over half of online teens (55%) used social networking sites in November 2006 and 65% did so in February 2008.
Social Networking Sites and Our Lives

Pew Internet and American Life Project, June, 2011

• Facebook users are more trusting than others
• Facebook users have more close relationships
• Facebook users are much more politically engaged than most people and more open to opposing points of view
• Facebook revives “dormant” relationships
Texting

• The median number of texts (i.e. the midpoint user in our sample) sent on a typical day by teens 12-17 rose from 50 in 2009 to 60 in 2011.

• Much of this increase occurred among older teens ages 14-17, who went from a median of 60 texts a day to a median of 100 two years later. Boys of all ages also increased their texting volume from a median of 30 texts daily in 2009 to 50 texts in 2011. Black teens showed an increase of a median of 60 texts per day to 80.

• Older girls remain the most enthusiastic texters, with a median of 100 texts a day in 2011, compared with 50 for boys the same age.

• 63% of all teens say they exchange text messages every day with people in their lives.

Snapshot of Reading 2013: People are Still Reading Books!

- More adults in America read at least one book in 2013 than did so in 2012 (76%, up two pts.)
- E-book reading is on the rise, but print-book reading is far more popular (69% read a print book in 2013 vs. 28% read an e-book)
- The younger the age group, the higher the percentage who read with some form of e-book
- Women read more than men over all formats (Women, 82%; Men, 69%)

If You Don’t Have Much Technology

• Do face-to-face activities that involve principles of digital reading and writing and social networking (especially when the classroom is “flipped”). (See Chapter 2 of *The Socially Networked Classroom*, by William Kist)
• Snowball activity: Discussion of blogging and audience
• Birthday/sequencing activity: discussion of nonlinearity
Blog as Learning Log

Little Victories

"This time, I'll be sailing."

So, that's it. The semester's over, and I only have one left. I think it's fitting to close out with Matt Nathanson's "Little Victories." I've been anxiously awaiting this final week.

This particular class has been an interesting ride for me, more so than any of the others. I've learned a lot about myself as a writer, teacher and person. I've learned that if I allow myself too much room to think, I'll be engulfed. I learned how to clear up enough time in a day to have for myself. I learned how to push past writing obstacles and just write. I learned that I won't be a terrible teacher. Of course, I've learned interesting and unique ways to teach; and I've used some of those strategies already.

Aside from learning that I hate people who drive, I think the most outstanding thing I've come to realize above all else is...

Create an Account for your Class

• Create a Twitter account for a class you’re teaching.
  Example from Marty Jencius for his Psychopath class: @CHDSPsycho

• Have students set up accounts if they don’t have them and follow each other and the class account

• Require students to post a link to something related to class X times per week

• Require students to “Reply” to X number of students per week, plus the class account
I'm posting a few days late, (a lot of days late) but it does serve me one advantage: I have seen the first round ... http://bit.ly/9HPAQn

Use Facebook at School

• Get permission from administrators and, probably, Board
• Communicate with parents
Steps of Facebook Project

• Discuss with students the difference between a personal and professional Facebook account.

• Have students set up a professional Facebook account.

• Teacher should set up a professional Facebook account as well.
• Students should use first names only or pseudonyms.
• Students should use avatars—any picture other than their own.
• Teacher sets up groups within Facebook for various purposes.
Groups in Facebook

• Teacher and students form writing groups and comment on each other’s writing.
• Teacher and students form literature circles to discuss books.
Post your feelings on the overall book now that we're finished with it.

I really enjoyed the overall book, it was a pretty easy read and it wasn't boring at all either. At times it was a little predictable but other times it was totally unpredictable. The book analyzed all the main characters really well and showed different sides of each of them. I never really knew what was coming next, which is always a good thing in reading a book. The beginning started off a little bit slow but it took off quickly after that. I also liked how it did "flashbacks" almost. It would go back to past memories either with Hassan and Colin's friendship or Colin's relationships with Katherines. It was easier to understand the characters' feelings when you knew what happened in their past and how that could've effected their feelings.

I somewhat enjoyed the overall book. At times, I felt as though it was a really quick read, and at other times, I felt as though the pages just kept getting longer and more boring. I liked how Colin used events that were currently happening to him to reflect back on his past girlfriends named Katherine. I also thought it was clever how there were footnotes at just about every page also. Most of the time, I felt that they were extremely helpful, because there were times where some of the things Colin said made absolutely no sense to me.

A Frozen Wonder | TIME For Kids

It began as just an ordinary day for Yevgeny Salinder. The 11-year-old boy was taking a walk near his home in central Russia when suddenly the extraordinary happened. Yevgeny found animal limbs sticking out of the frozen ground. The boy told his parents, who immediately contacted scientists. When experts began digging out the buried creature, they discovered it was a 30,000-year-old woolly mammoth. Scientists have named the mammoth Jenya after the boy who discovered it.

Extraordinary Jenya

The mammoth has been named Jenya, which is a nickname for the discoverer’s Russian name, Yevgeny. Scientists say Jenya died at the age of 16. He is 6 feet 6 inches tall, and weighs 1,100 pounds. Since some mammoths may have been as tall as 13 feet, scientists are taking note of Jenya’s size. “He was pretty small for his age,” says Professor Alexei Tikhonov of the Zoology Institute in St. Petersburg, Russia. What is also unusual about this mammoth is his missing left tusk. The loss of a tusk would have made fighting difficult for Jenya. Experts think a crack in his remaining tusk means that the mammoth may have been hunted by humans.

The well-preserved state of Jenya is what makes this discovery especially extraordinary. Much of the carcass still has scraps of flesh, fur and organs intact. The mammoth also has a massive hump of fat on his back. The fat helped mammoths keep warm during the frigid Arctic winters. The condition of Jenya’s body will allow scientists and experts to learn more about woolly mammoths. With enough information, one day it may be possible to recreate this prehistoric wonder.
